NOTES		
<p>Recommend approval of a sole source request for engineering and design of City Lot bulkhead wall stormwater discharge penetration with Hussey Gay Bell Inc. in the amount of \$80,000.</p> <p>The design of the bulkhead wall at City Lot along the western Springfield Canal bank and associated canal widening was approved by Council on February 11, 2021, and awarded to Hussey Gay Bell Inc. There is currently a 36" diameter storm drain running through City Lot and out falling into the Springfield canal. This 36" diameter existing storm drain is the drainage conveyance for the Carver Village Neighborhood network of storm drainage pipes. This neighborhood drainage system requires future upgrades/upsizing to effectively convey stormwater drainage out of the neighborhood and to current City drainage standards.</p> <p>This need was identified following HGB's initial award of the canal wall design along City Lot. Currently the City Stormwater Management Division has identified the need to incorporate the required future drainage conveyance outfall for the Carver Village Neighborhood into and through the proposed canal wall along City Lot. To upgrade this outfall through the proposed canal wall at a later time will require modification of the structural integrity of the completed City Lot canal wall and is not feasible at that time in the future. This established large 5'X10' concrete box culvert outfall penetration of the City Lot canal wall will establish the foundational drainage infrastructure to extend neighborhood drainage improvements into Carver Village following downstream Springfield Canal improvements. Based on familiarity and knowledge of the project, City Staff recommends awarding to Hussey Gay Bell for the additional design task.</p> <p>The funding for this request is from SPLOST VII allocated Springfield Canal Drainage Improvements. S.S. Hussey Gay Bell Inc. (Savannah, GA)(B) \$80,000 (B) indicates a local, non DBE owned company. Recommend Approval</p>
