### IDMS Technical Specifications

IDMS Technical Specifications and proposal submittal guidelines to follow.

# IDMS Technical Specifications

## **1. Introduction**

The Savannah Airport Commission (“SAC”) is requesting the submittal of written proposals (“RFP” or “Proposal”) from vendors interested in providing Identity Management Systems (IDMS). The new system should offer secure electronic enrollment capability and report generation for tenant signatories and Airport Credential Office staff. The project will include design, equipment, installation, configuration, data entry for conversion of paper files to the new electronic filing system, as well as appropriate levels of training to SAC staff.

## **2. Purpose**

The purpose of the IDMS is to replace paper storage of the SAC owned and maintained credential-holder files with an electronic file system, as well as to integrate that file information with SAC’s current Telos ID fingerprint system and JCI P2000 Access Control System (ACS), to provide more accurate information for regulatory reporting needs, signatory auditing, and a streamlined the credential application process.

## **3. Background**

SAC’s credentialing office currently retains extensive paper files containing personal information for several thousand credential holders. The cabinets housing these files occupy a significant portion of the available floor space within the office. While still effective, this system is outdated and requires significant manual data entry from office staff to integrate with SAC’s ACS and fingerprinting system. Moving forward, SAC would like to convert the existing paper files to an electronic format within the new IDMS, eliminate the need for extensive paper personnel files, offer a secure web-based or kiosk-based credential and signatory application process, and to integrate the new IDMS with the current fingerprint and access control systems. The intent of the upgrade is to reduce the amount of time SAC staff spend on manual data entry and to simplify the methods used for credential application, signatory auditing, and regulatory reporting requirement.

## **4. Scope of Work**

The scope of services is an outline of the services which the SAC anticipates the successful Proposer to perform. The outline in this section is presented for the primary purpose of allowing SAC to evaluate proposals. The precise scope of service to be incorporated into the contract service agreement will be based upon the submitted Proposal and may be the subject of negotiations between SAC and the successful Proposer.

As shown and described below, the IDMS project shall consist of the following phases.

### **4.1 Phase One: Design**

- 4.2.1.** The Proposer shall coordinate in advance all installation work with SAC, and shall propose a qualified Project Manager to serve as the SAC single point of contact during all phases of the Project installation.
- 4.2.2.** All work within the public spaces of the terminal building shall be coordinated in advance and not interfere with SAC's ability to operate normally unless approved by the SAC Authorized Project Manager.
- 4.2.3.** Integrate the IDMS for communication with Telos ID and JCI P2000 systems.

#### **4.3. Phase Three: Testing**

- 4.3.1.** The Proposer shall provide all personnel, equipment, instrumentation, and supplies necessary to perform all testing.

- 4.4.2.** The Proposer will be responsible for providing SAC with an electronic document (In PDF Format) detailing the capabilities of the IDMS system.

#### **4.5. Phase Five: Training**

- 4.5.1.** The Proposer shall provide at a minimum, (2) two training sessions for SAC staff.
- 4.5.2.** The training sessions will focus on the administration and maintenance of the IDMS, and generation of desired reports.
- 4.5.3.** Training sessions will be conducted locally at the Savannah/Hilton Head International Airport terminal building.

**4.5.4.** The training sessions shall consist of “hands-on” training. “Hands-on” shall consist of working with the actual IDMS interface and/or tenant enrollment kiosks.

**4.5.5.** Each training session will consist of a minimum of (4) four hours of training time.

**4.5.6.** The attendance at each session will be no more than (8) eight people.

**4.5.7.** The training sessions will include as appropriate, and as a minimum:

- Typical day-to-day operations and capabilities.
- Basic configuration, troubleshooting, and fault determination procedures.
- Generation of custom reports.
- Preventative maintenance procedures and schedules.

## **4.6. Final Inspection and Acceptance**

**4.6.1.** As part of the response to this RFP, the Proposer must submit an Acceptance Test Procedure (“ATP”) that will be used to demonstrate all required functionality of the System, including all hardware and software, included in the RFP. SAC will work with the Proposer to make any necessary revisions and/or modifications to the ATP before being formally adopted by SAC to satisfy the requirements under the Project.

**4.6.2.** If, during the course of performing the ATP, SAC determines, in its sole discretion, that the system or any hardware/software performs unfavorably or fails any part of the acceptance test; the deficiency will be logged on a punch list maintained by SAC. Identified problems on the punch list shall be corrected at no additional expense to the SAC. The Proposer shall correct all deficiencies recorded on the punch list within (10) ten days of the initial ATP inspections.
